

Appl. Serial No. 10/008,837
Amendment Under 37 C.F.R. § 1.312

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

- 1 1. (Cancelled)
- 1 2. (Previously Presented) The system of claim 8, wherein said means for attenuating a
2 portion of the produced light comprises at least one substantially L-shaped arm.
- 1 3. (Previously Presented) The system of claim 8, wherein said means for attenuating a
2 portion of the produced light comprises a plurality of arms evenly spaced from one another.
- 1 4. (Previously Presented) The system of claim 8, further comprising means for focusing
2 light emitted by said means for producing light onto said target area.
- 1 5. (Original) The system of claim 4, wherein said means for attenuating a portion of the
2 produced light is mounted in a registration position on said means for focusing light.
- 1 6. (Previously Presented) The system of claim 8, wherein said desired illumination pattern
2 excludes a lower portion of said target area.
- 1 7. (Cancelled)

Appln. Serial No. 10/008,837
Amendment Under 37 C.F.R. § 1.312

1 8. (Currently Amended) A system for illuminating a target area with a desired illumination
2 pattern, comprising:

3 means for producing light to illuminate said target area, said means for producing
4 comprising a light source;

5 means for attenuating a portion of the produced light;

6 means for positioning said means for attenuating light in a registration position with
7 respect to said means for producing light so that the attenuated light is blocked from a portion of
8 said target area and the unblocked light illuminates said target area with said desired illumination
9 pattern; and

10 another light source for illuminating another portion of said target area,

11 wherein there is substantially no overlap in light emitted from each of said light sources.

1 9. (Previously Presented) A system for illuminating a target area with a desired
2 illumination pattern, comprising:

3 a light source having plural light emitters each to produce light to illuminate said target
4 area;

5 a light attenuator having plural blocking elements for blocking a portion of the produced
6 light from each light emitter;

7 a guide for positioning said light attenuator in a registration position with respect to said
8 light source so that a portion of the produced light from each light emitter is blocked from said
9 target area and the unblocked light from each light emitter illuminates said target area to achieve
10 said desired illumination pattern.

1 10. (Cancelled)

Appln. Serial No. 10/008,837
Amendment Under 37 C.F.R. § 1.312

- 1 11. (Original) A system for illuminating a target area on a data cartridge with a desired
2 illumination pattern, comprising:
3 a cartridge-engaging assembly positionable adjacent said data cartridge;
4 a light source mounted to said cartridge-engaging assembly; and
5 a light attenuator mounted to said cartridge-engaging assembly for blocking a portion of
6 light emitted by said light source so that the unblocked light illuminates said target area with said
7 desired illumination pattern.
- 1 12. (Original) The system of claim 11, wherein said light attenuator has at least one light-
2 attenuating arm.
- 1 13. (Original) The system of claim 12, wherein said at least one light-attenuating arm is
2 substantially L-shaped.
- 1 14. (Original) The system of claim 11, further comprising registration means for positioning
2 said light attenuator in a registration position with respect to said light source.
- 1 15. (Previously Presented) The system of claim 11, further comprising:
2 a lens to focus said light emitted by said light source onto said target area; and
3 a detector to detect light reflected from the target area.
- 1 16. (Original) The system of claim 15, wherein said light attenuator is mounted in a
2 registration position to said lens.
- 1 17. (Original) The system of claim 11, wherein said light source is at least one light-emitting
2 diode.

Appln. Serial No. 10/008,837
Amendment Under 37 C.F.R. § 1.312

1 18. (Original) A method for illuminating a target area on a data cartridge with a desired
2 illumination pattern, comprising:
3 positioning a cartridge-engaging assembly adjacent to said data cartridge;
4 emitting light from at least one light source on said cartridge-engaging assembly; and
5 attenuating a portion of said emitted light so that the unblocked light illuminates said
6 target area with said desired illumination pattern.

1 19. (Original) The method of claim 18, wherein emitting light is from both a first light
2 source and a second light source on said cartridge-engaging assembly, and only a portion of said
3 emitted light from said first light source is attenuated.

1 20. (Previously Presented) A method for illuminating a target area on a data cartridge with a
2 desired illumination pattern, comprising:
3 positioning a cartridge-engaging assembly adjacent to said data cartridge;
4 emitting light from at least one light source on said cartridge-engaging assembly;
5 attenuating a portion of said emitted light so that the unblocked light illuminates said
6 target area with said desired illumination pattern,
7 wherein emitting light is from both a first light source and a second light source on said
8 cartridge-engaging assembly, and only a portion of said emitted light from said first light source
9 is attenuated; and
10 attenuating said portion of said emitted light so that there is substantially no overlap
11 between the light emitted by said first light source and the light emitted by said second light
12 source.

1 21. (Original) The method of claim 18, wherein attenuating said portion of said emitted light
2 reduces the formation of a light tail on said data cartridge.

1 22. (Original) The method of claim 18, further comprising aligning said light-attenuating
2 means with said at least one light source.

Appln. Serial No. 10/008,837
Amendment Under 37 C.F.R. § 1.312

1 23. (Original) The method of claim 22, further comprising providing registration means for
2 aligning said light-attenuating means with said at least one light source.

1 24. (Original) The method of claim 18, further comprising attenuating about one-half of said
2 emitted light.

1 25. (Previously Presented) The system of claim 9, further comprising:
2 a lens to focus light from the light emitters onto the target area; and
3 a detector to detect light reflected from the target area.

1 26. (Previously Presented) The system of claim 9, wherein the light source comprises a first
2 light source to illuminate a first portion of the target area, the system further comprising a second
3 light source to illuminate a second portion of the target area, wherein substantially no light from
4 the first light source illuminates the second portion of the target area.

1 27. (Previously Presented) The system of claim 9, further comprising a cartridge-engaging
2 assembly movable to plural positions to engage corresponding plural data cartridges, the light
3 source and light attenuator mounted to the cartridge-engaging assembly.

1 28. (Previously Presented) The system of claim 9, further comprising a bar code reader, the
2 light source being part of the bar code reader, and wherein the target area comprises a bar code
3 onto which the light source emits light.

1 29. (Previously Presented) The system of claim 11, wherein the light source has plural light
2 emitting elements, and wherein the light attenuator has plural light blocking elements to
3 attenuate emitted light from respective light emitting elements,
4 wherein the light attenuator has a support member to which are attached the light
5 blocking elements.

Appl. Serial No. 10/008,837
Amendment Under 37 C.F.R. § 1.312

1 30. (Previously Presented) The system of claim 11, wherein the light source has plural light
2 emitting elements, and wherein the light attenuator has plural light blocking elements to
3 attenuate emitted light from respective light emitting elements,
4 wherein the light source comprises a substrate on which the light emitting elements are
5 formed, the light attenuator being attached to the substrate.

1 31. (Previously Presented) The system of claim 11, wherein the cartridge-engaging assembly
2 is adapted to withdraw the data cartridge from a cartridge-receiving device.

1 32. (Previously Presented) The method of claim 18, wherein the data cartridge comprises a
2 first data cartridge, and wherein positioning the cartridge-engaging assembly comprises moving
3 the cartridge-engaging assembly from a first position adjacent a second data cartridge to a second
4 position adjacent the first data cartridge.

1 33. (Previously Presented) The method of claim 18, further comprising reading indicia in the
2 target area based on illuminating the target area with the light source, the indicia to identify the
3 data cartridge.

1 34. (Previously Presented) The method of claim 18, further comprising reading, by a bar
2 code reader, a bar code in the target area based on illuminating the target area with the light
3 source.
